High-Performance People Delivering High-Performance Solutions

OVERVIEW

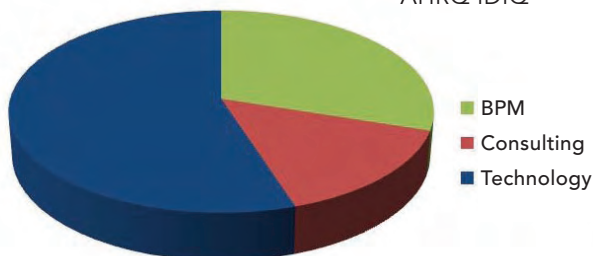

Data Federal Corporation is a professional services consulting firm with experience in the development, execution, and management of federal government initiatives and the technologies supporting them. Data Federal solves the unique challenges facing federal agencies by understanding how the three pillars to any problem, i.e., people, processes and technology, should be optimized. Once the basis of the problem is understood, Data Federal is able to deliver effective solutions by applying and aligning the right resources to successfully achieve the project's objective.

REPRESENTATIVE PROJECTS

Customer: United States Trade Representative (USTR), Executive Office of the President (EOP)
Contract: Web Site Redesign and CMS Integration
Description: Full-scale redesign and Content

Management System (CMS) integration of ustr.gov, the website for the United States Trade Representative, within the Executive Office of the President. This portal serves as the primary content management and distribution system for press releases, trade agreements, and related documents for public dissemination.

Customer: Department of Defense (DoD) – Intelligence Community (IC)
Contract: Business Process Management (BPM) Consulting
Description: Provide consulting support to an agency within the Intelligence Community. Data Federal provides Business Process Management solutions, including organizational consulting support, organizational development guidance, and other related activities needed to streamline operations. Support includes the design and development of an automated requirements process prototype built on a commercial BPM System.

Customer: National Geospatial Agency (NGA) – GIAT
Contract: Mission Management - Prototype
Description: Designing and building a prototype mission management capability for a U.S. military customer, providing unprecedented visibility into support, production, and execution, as well as the metrics surrounding those activities.

Customer: Department of Transportation (DOT) – Office of the Chief Information Officer
Contract: Web Portal Design
Description: Design and rollout of the Agency's web travel portal under a very tight schedule. Data Federal will also develop the technology strategy and roadmap for the portal to assist DOT in meeting the Administration's Open Government Directive. This work includes all aspects of the portal, including content management, hosting, and detailed cost savings and implementation strategies.

Customer: Nuclear Regulatory Commission (NRC) – Office of the Chief Information Officer
Contract: Web Site Redesign and CMS Integration
Description: Full-scale redesign and implementation of the Nuclear Regulatory Commission's public Web site, including integration into a custom Content Management System (CMS). Management of this program is intended to improve general user experience, content, navigation, accessibility and compliance with Section 508 and the Open Government Directive.

Customer: Health Resources & Services Administration (HRSA) – Dept. of Health and Human Services
Contract: Business Process Reengineering of the Grant Closeout Process
Description: Five year contract to provide grant closeout services utilizing newly developed processes and a proprietary Business Process Management based grant closeout system. System allows for the streamlining of the grant closeout process, aligning team-members along a proven workflow and ensuring effective performance. Data Federal's performance in FY 2009 resulted in a 71% improvement over the number of closeouts performed in 2008.

Customer: Department of the Navy, Office of Naval Research (ONR)
Contract: Freedom of Information Act (FOIA) / Privacy Act (PA) Services
Description: Five-year contract to manage the FOIA/PA program for the Office of Naval Research, Office of General Counsel. Data Federal provides FOIA consulting services to ONR relating to the "releaseability" of information in accordance with federal law and ONR regulations and provides analysis and support to the ONR Ethics and Standards of Conduct program. Work includes areas such as documented records searches, releasability analysis, and drafting of all legal correspondence.

Customer: Federal Aviation Administration (FAA)
Contract: Litigation Support IDIQ
Description: Three-year IDIQ contract for the FAA's Office of Chief Counsel to provide paralegal support to the FAA in relation to class action employment/discrimination cases filed against the agency. Because of the advanced degrees and specialized experience of Data Federal's personnel, the FAA had the flexibility to assign very complex work assignments that a "traditional" paralegal would not have been qualified to perform.

Customer: Defense Information Systems Agency (DISA)
Contract: CoreNET
Description: Five-year subcontract to support full-scale managed services to the Agency's CoreNET intranet. Responsible for supporting the design of several systems modifications to improve the IT support provided to DISA and to meet the Agency's requirement of operating under the ITIL process framework. The contract includes IT support, systems and network engineering, and process improvement.

Customer: Department of Defense (DoD) – Intelligence Community (IC)
Contract: Business Process Management Support
Description: Provide Business Process Management (BPM) consulting support (Process, Organizational, and Technology) for a large DoD IC organization which designs, develops, and maintains multiple technology-focused projects and programs. Data Federal's efforts include implementing a BPM-automation effort to support and sustain the newly developed objectives and processes.

Customer: Internal Revenue Service (IRS)
Contract: Database Migration and Performance Improvement
Description: Data Federal is improving the performance of the Internal Revenue Service's (IRS) Enforcement Revenue Information System (ERIS) database system as it is migrated to a DB2 platform. ERIS is a terabyte-sized, cross-functional database that tracks the amount and timing of revenue from all IRS enforcement functions, along with the direct hours spent on the cases, where available. The transition from a legacy mainframe system to a Sun Workstation platform will run concurrent to a system upgrade. Data Federal is responsible for making recommendations to improve each query's performance, measure the performance boost of each recommendation, and create a Query Performance Plan.
